

Hygienic Glass Hinged Door

Applications:

Pharmaceutical Cleanrooms
Research Laboratories
Healthcare Environments
Pharmaceutical Manufacturing

Key Features:

- ✓ Excellent cleanability
- ✓ Maximises natural light
- ✓ Bright and contemporary
- ✓ High durability
- ✓ Flat door panel with no raised edges to harbour bacteria
- ✓ Single or double door options
- ✓ Can be automated

Product Details:

The combination of a Dortek toughened glass door with the clean lines of the stainless steel frame gives a showpiece appearance to a facility whilst also maintaining high hygiene.

Dortek glass hinged doors are designed for areas which require both high hygiene and maximum visibility.

The door blade is a strong 10mm thick hard glass panel with a complimentary stainless steel hardware.

With a sleek and attractive design the glass door offers unobstructed views and is ideal for areas where both light and openness are of great importance.

A range of frames to suit particular wall construction and thickness are available in aluminium or stainless steel. Doors can be manufactured to suit most dimensions.

There are many applications for these doors including clean rooms, laboratories, BSL3 & BSL4 labs, healthcare environments or manufacturing facilities where increased visibility is a safety factor.
